PRODUCT OVERVIEW

Black Ultra

Increases CEC, buffers soil and water salts, improves water retention and improves overall soil biology.

Foundation LM

An innovative fertiliser biocatalyst that increases nutrient availability from liquid fertilisers and the soil to improve overall plant performance.

Black Label Zinc

A proprietary nitrogen and phosphorus formulation complexed with 7.1% organic acids and 1% zinc, proven to provide outstanding mobility, availability and efficiency resulting in higher yields, improved crop quality and outstanding return on investment.

EzyFlow Nano Lime

A highly concentrated, fully water dispersable liquid lime formulated with micronised particles for rapid reactivity in the soil to amend pH and to provide calcium for strong plant development.

EzyFlow Nano Gypsum

A liquid suspension of technical grade gypsum dihydrate (Ca 16%, sulphate sulphur 13%) formulated with micronised particles to dramatically improve bioavailability and soil structure by reducing sodium build-up and increasing calcium levels in the soil. Consider using in conjunction with, or as a replacement for EzyFlow Nano Lime in alkaline or sodic soils or where water quality is a concern.

SOIL AND TISSUE TESTING

Soil Testing

A fully comprehensive soil test is recommended to determine whether EzyFlow Nano Lime or EzyFlow Nano Gypsum is required and at what rate is necessary. It is recommended that a soil sample be collected prior to the commencement of the season and another taken during the season to assess your fertility program and amend as necessary.

Tissue Testing

Tissue tests should be done regularly throughout the growing season to check the suitability of the nutritional program and to amend as necessary. If nutrient levels are low in the plant tissue, it may be worth considering an application of NutriSync D to improve nutrient uptake and translocation. Ideally, collect tissue samples from the same location as soil samples.

Water Testing

Where irrigation is being used it is recommended that the water be tested throughout the season to determine if any amendments are required (e.g. EzyFlow Nano Gypsum), what rate to use and whether the water quality is changing throughout the season.
