Conclusions

- This trial demonstrates the flexibility of Maximum N-Pact on Wheat whether it is applied at early, mid or at later timings
- The trial indicates that Maximum N-Pact @ 10L/ ha is equivalent to 40L/ ha of UAN. This has been seen in a number of trials now where baselines nutrition is adequate
- Maximum N-Pact has very good compatibility with herbicide, insecticide and fungicide applications which can mean a one pass trip for the grower saving time and money
